

Dräger solutions in the Shipbuilding Industry

399 m

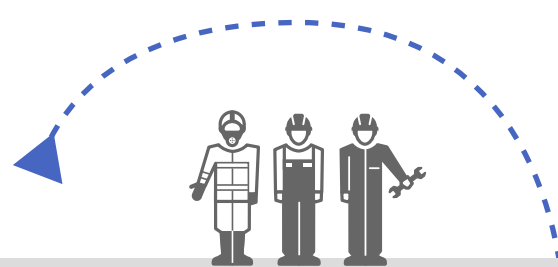

Mærsk Mc-Kinney Møller

73 m

Airbus A380

8 m

Detached house

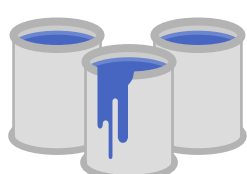

Dräger products and services support various application scenarios:

Coating and painting

278

times the amount of paint needed to paint the White House was required for the largest passenger ship in the world, Oasis of the Sea.

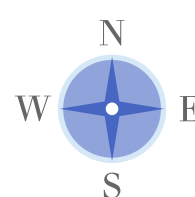

Up to 70%

of a paint consists of potentially carcinogenic solvents.

Body protection

Eye & respiratory protection

Firefighting

25%

of all shipping losses in the container fleet are caused by fire on board.

Even the biggest cargo ships only have a 15 to 25-strong crew, on average. It is, therefore, crucial that the crew are well-trained and competent in fire protection.

Flame detectors

Head protection

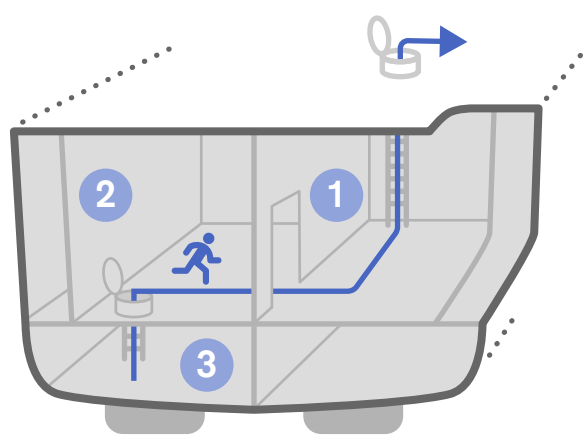

Respiratory protection

Training

Confined space entry

1 Enclosed Space

2 Adjacent Space

3 Confined Space

There are three different types of potentially unsafe spaces on a ship. Sudden gas leaks can lead to life-threatening scenarios.

15 min.

air supply is provided by Dräger Saver, the compressed air escape device.

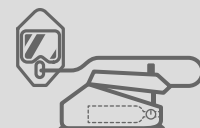

Area monitoring

Pre-entry check

Escape devices

Dräger products protect, support, and save lives.
